

Molpro Quantum Chemistry Software - Product Catalogue

Licences for Molpro are available for different combinations of "type" (who can use the licence, and where) and "duration" (how long the licence lasts). All licences are normally offered for a fixed term of one, two, three or four years (longer term licences on request). These licences include patches and updates to the latest version of the software throughout their duration.

Holders of a group licence may use Molpro for teaching by their group members. In the case of site licences, teaching is permitted for all members of the institution at the site for which the licence is valid.

Node-lock licences are issued for one specific computer, with a maximum number of cores. For example, a licence of type node8 will work on a computer with up to 8 cores, but not on a computer with 12 cores.

Optionally, licences for the graphical user interface gmolpro are available. gmolpro needs a valid licence for Molpro also.
